

Pimp my website: the makeover

Simona Miraglia
Henning Brüske

New Style and New Structure

- New LOGO in shades of red
- New 'home' page
- New submenus
- PROJECT becomes THE ACTION
 - Scientific focus
 - Working groups
 - Target groups/end users
 - Impact
 - Expected results
 - Innovation Committee
 - Contacts
 - Join us

***COST Action TU1402:
Quantifying the Value of
Structural Health Monitoring***

New Style and New Structure

- ORGANIZATION becomes THE NETWORK
 - Steering Committee.
 - Management Committee
 - Advisory board
 - Short Term Scientific Mission
Call/ Docs & Testimonials
 - International observers and experts

- DOCUMENTS becomes RESOURCES AND DOWNLOADS
 - Journal and conference papers
 - Reports
 - Glossary
 - Action Documents
 - Photos and Videos

- NEWS, EVENTS are merged in NEWS AND EVENTS

SHM...just value it!

**COST Action TU1402:
Quantifying the Value of
Structural Health Monitoring**

THE ACTION THE NETWORK RESOURCES AND DOWNLOADS NEWS AND EVENTS

SHM ... just value it

Structural Health Monitoring is good. But it can be much better. We build upon decades of Structural Health Monitoring (SHM), structural risk and reliability research and development grown into a comprehensive research community and an important part of today's infrastructure engineering. Our network incorporates a tremendous knowledge about SHM technologies, SHM data analysis, structural performance and deterioration as well as infrastructure operation.

We want to enhance the benefit of SHM by novel utilization of applied decision analysis on how to assess the value of SHM – even before it is implemented. We know already that the value of SHM can be tremendous. We just have to quantify it. Knowing the value of SHM, we can improve the decision basis for design, operation and life-cycle integrity management of structures and facilitate more cost efficient, reliable and safe strategies for maintaining and developing the built environment to the benefit of society.

And we mean it.
